- 335 Dietzer red mandel do
- 336 Niemen's red do
- 337 Schwarzeblut do
- 338 Menemonisten do

In France, Germany, and the Netherlands, the Renettes are generally preferred as the best for the table. About fifty kinds of table apples are grafted on paradise stocks for dwarfing, and which are warranted to produce fruit the second year after planting. They are very ornamental and make a fine show in a small garden, both when loaded with their beautiful blossoms, and afterwards with fruit.

PEARS, 37½ cents each.

M denotes melting pears.
B. buttry do.
B. baking do.
F. good do.
exc. the best do.
Ripe in July.

I import every season many valuable new kinds of Pears, principally from the Netherlands, which is the real nursery for the best Pears. They are sent from thence to the London Horticultural Society, by my eldest brother the Chevalier Parmentier, or by my old correspondent and friend Mr. the Professor Van Mons.

Price from 75 cents to 1 dollar.

GRAPE VINES.

For this delightful fruit I ask the confidence of the amateur. The cultivation of the grape in the open ground has always been the object of my greatest care and assiduity; and I feel no hesitation in recommending to my friends and the public my present collection, both of table and wine grapes, for their size, flavour, prolificness, and many of them for their capability of enduring the severity of the winters of the northern states. Those which do not ripen till October and later, are better suited to the climate south of Philadelphia; but may be greatly assisted in the northern states, by being placed against a fence or wall.

I offer the following twelve of the finest table grapes by way of

SUBSCRIPTION.

Price \$6, to be paid for on delivery.

- No. 1 White chasselas
2 Imperial tokay of Hungary, very hardy
3 Yellow chasselas of Thomey
4 Golden do
5 Musk do
6 Royal do
7 Large maroc
8 Meunier, very hardy and great bearer
9 Violet do
10 Black muscat
11 Grey muscat
12 Large frankenthal

The whole of these are from the most northern part of France; and experience has proved that they can be successfully raised in this country.

The subscribers for planting and cultivation.

The same vines can be had separately at 75 cents a piece. If desired, I will point out the kinds most suitable to different soils and situations, both for large and small plantations.

The vineyard grape vines will be of the best quality raised in the north of France, which gives additional security for their endurance of this climate: the price will be only 25 cents each. I warrant them to grow, and will replace those not growing, provided the purchaser has followed my directions in planting them. For the truth of this assertion I refer to those gentlemen who have bought their vines of me; and I have such confidence in the good order in which I deliver them, that I give this warranty without the least hesitation.

On light and sandy soils, which soon become dry, the fall is the best time to set out grape vines, or indeed any thing else, except the peach; but where the soil is strong, and retains its moisture, the spring is best.

The vines will be sent to subscribers between the 15th of October and 14th of December, and the 1st of April and 15th of May, 1829. They will be securely packed in moss, so that they may be sent in safety several hundred miles.

Isaac M. Woolley, Esq. No. 218 Broadway, opposite St. Paul's Church, and Messrs. Thorburn & Son, No. 67 Liberty-street, are empowered to receive subscriptions. Orders sent to any of my agents, or to my establishment, will be immediately attended to.

Prices marked on those of 25 and 37½ cents, the others are 50 cents, 75 cents, and 1 dollar. Those marked * will be delivered at the latter end of next March.

148 Chasselas a la rose, parfum de rose, very fine	large	good	Oct.
149 Vigne de Jericho—enormous bunches, weighing sometimes 10 to 20 pounds, but wants the green-house here—in Georgia, Florida, and more south it will ripen in the open air.	do	do	do

The price of these two last kinds will be in proportion to the age of the roots; but I do not offer them with perfect confidence, as I have not yet ascertained their respective qualities.

NATIVE GRAPES, 37½ to 50 cents.

- 149 Isabella from South Carolina
150 Catawba purple
151 Schuyllkill muscadell, or Alexander, or Spring-mill constantia
152 Worthington, black
153 Loughborough
154 Oughwighburg, white
155 Scuppernon*

I have planted, by way of experiment, the following in small numbers.

From the department of the high Pyrenees.
Courbu, lambusquat, red camerau, blue tokay, blanc madame, axate saume, cascarolo, bourdelas.

From the borders of the Po, near Turin.
Grignoli, cortsonera, balsamina, parpeuri, balavri, aleatico, dolecto, barbara noir.

From the departments of Dordogne, Drome, Cantal.
Persolette, violet gromier, raisin noir, guila noir, folle blanche, piedsaun, gros noir, verdut blanc, 2 kinds of saunvin, navarro, merle d'Espagne, cornet, mausac blanc, gruselle, amarot noir, nerre, epicier noir, chaliane noir, merbregie, bordelais, merle blanc, and about 70 varieties more, but of no interest till I have ascertained their qualities.

N.B. The muscat of Champagne was presented by me to the New-York Horticultural Society. It is an excellent wine grape, white, the skin thin, without pulp, and slightly acidulous. It is very hardy and grows vigorously, and is well worthy of cultivation. It ripens fit for making wine from the middle of September to the last of October. I make these remarks concerning this grape after a trial of three years in this country.

PLUMS, 50 cents.

B superior flavour.
L large size.
* those for sale in the fall of 1829 or 1830.

Ripen in July.

- 1 Early yellow, or jaune hative de Catalogne

89 Weeping or American do	50 cts.	pendula
90 Conical do*		fastigiata

I have made the foregoing divisions in the Ornamental Department, which will be found to suit the generality of situations, though it may sometimes be necessary to change one class for another, where the soil is of unequal fertility.

I have laid out several landscape gardens in this country, and have made many designs for a great number of gentlemen: but I have more fully explained my views in an article which I furnished Mr. Fessenden of Boston, and which I will here introduce.

It has been reserved for the good taste of the present age to make many advantageous changes in the embellishment of gardens, and to reinstate Nature in the possession of those rights from which she has too long been banished by an undue regard to symmetry.

Our ancestors gave to every part of a garden all the exactness of geometric forms: they seem to have known of no other way to plant trees, except in straight lines; a system totally destructive to beauty. We now see how absurd it was, except in the public gardens of a city, to apply the rules of architecture to the embellishment of gardens.

The majestic trunk is now allowed amply to extend its form, or of following in its vigorous shoots the plan of nature. Gardens are now treated like natural landscapes, the charms of which are generally injured by any interference of art.

The advantages of these changes are so manifest, and so well appreciated, that further proofs seem unnecessary; for where can we find an individual, sensible to the beauties and charms of nature, who would prefer a symmetric garden to one in modern taste; who would not prefer to walk in a plantation irregular and picturesque, rather than in those straight and monotonous alleys, bordered with mournful box, the resort of noxious insects?

Where is the person, gifted with any taste, who would not choose those alleys that wind without constraint, in preference to those that straight lines which can be measured by one glance of the eye, and the monotony of which is unvaried? Instead of this, the modern style presents to you a constant change of scene, perfectly in ac-

cordance with the desires of a man who loves, as he continues his walk, to have new objects laid open to his view. To understand this style of a garden, requires a quick perception of the beauties of a landscape, without which the existing plantation might be destroyed instead of being used. Limited prospects, and neighbouring houses and buildings not worthy of notice, should be concealed, and the view left open to those objects which strike the eye of the beholder agreeably. The front of the house ought always to be uncovered, the principal point of view seen, or conjectured. A vast idea of the proprietor should be given, and this can only be done by a grand plan, in which nothing niggardly is to be seen.

Rows of trees should never be planted before the house, particularly when the house has been built in good taste and at great expense. It may be objected to this, that the shade is wanted, and this I would not exclude; but, instead of one row in front, I would plant thick groups of trees on the three other sides, and leave the front open.

When you choose the situation for a country house, let it be at some distance from the public road, so that the road which leads to it may give an idea of the extent of the domains, and care should be taken that the road is proportioned to this extent. It ought to be gently serpentine, and from 8 to 10 feet wide, so that carriages may pass. There should be some cause for this winding,—that is to say, some groups of trees should be so placed as to appear to require it; for naturally the road would have led directly to the house, but the person walking, when he sees these groups of trees, will see at once why it does not. Besides, he will be agreeably amused by the variety of views which will show to advantage the manner in which the artist has executed his plan, and the choice he has made of a situation.

If the house is placed on an eminence or side of a hill, the prospect will be much more beautiful if you can enjoy the view of water: and to the whole effect, and to facilitate the labours of the artist, it is desirable that a grass-plot should naturally present itself.

The plantations and groups of trees near the house should be, if possible, of a deep green; they will extend the view and the perspective, and produce the effect of shades in a landscape picture, where the groups of trees in front are of a darker shade, and seem to remove the perspective to the extremity of the landscape. For the same reason, the trees at the farth part of a park, or a garden, should be those of a thin and light foliage.

Plantations should consist of, besides merely ornamental trees, those fruit trees which are high and of bright foliage. Their flowers in spring, and branches loaded with fruit in autumn, make them objects of great beauty and interest. The apple-tree alone, on account of its horizontal branches, should be confined to the orchard, where its useful products are ornamental and valuable.

The most should be made of the agreeable and interesting views of the surrounding landscape. They may be made useful to the general plan by being represented as part of the domain; for this reason I highly approve of blind fences and live hedges. But fences, necessary as enclosures, should be concealed so as not to appear as boundaries to the establishment, and present to the eye a disagreeable interruption in the prospect. The judicious use of hermitages, arbours, cottages, and rotundas, will add to the effect, in picturesque gardens and ornamental farms. If you use these ornaments, place the hermitage in some retired spot: a small rivulet would be an appropriate and beautiful accompaniment. The rustic arbour and cottage may occupy a place less secluded. An elegant rotunda should be seen from a distance, and on a hill or eminence. It should make a part of the establishment of a wealthy man, as well as pagodas, turrets, and Chinese towers. These ornaments are so expensive that they are beyond the means of most persons: but hermitages, arbours, and cottages, may generally be afforded, as there is little expensive in their construction.

Rustic bridges are very pretty where there is a stream, and they can be made of use; but they have no pretensions as mere accompaniments to a plantation. Obelisks, columns, &c. should be placed on elevated places.

My plan is not expensive; on the contrary, I always preserve the existing plantations, when they do not obstruct some important view; a few handsome groups, placed with taste, will change advantageously the face of a country-seat, and render it a very interesting and agreeable place.

My charges are moderate. I also furnish maps for city gardens, with a memorandum of what they will contain, and of the probable expense.

I wish to introduce the use of niches for statues with drapery, or for busts of celebrated personages, which will produce a very good effect when seen from the saloon of the house, if accompanied by a few trees handsomely disposed on the grass-plot.

The only large evergreen which succeeds in this latitude, is the Balsam Fir, *pinus balsamea*—price from 50 cents to 1 dollar.

My collection of Herbaceous Plants is very good, and contains many species of Peony, Fleur de Luce, Phlox, Speedwell, Lychnis, Carnation, Pink, Lilies, &c. &c. a catalogue of which I mean to publish shortly, with that of the Green house Plants.

AGENTS.

New-York—Isaac W. Woolley, commission store, 218 Broadway, opposite St. Paul's Church.
Grant Thorburn & Son, 67 Liberty street.
I have a letter-box at Mr. Harvey Spencer's grocery store, 4 Fulton-street.

Hudson, N. Y.—W. E. Furman, Esq.

Catskill, N. Y.—Wilkes Hyde.

Albany, N. Y.—Vanderburgh.

Geneva, N. Y.—Martin Allen.

Lyons, Wayne co. N. Y.—E. C. Howard, Esq.

Rochester, N. Y.—Luther Tucker & Co.

Buffalo, N. Y.—Lewis F. Allen, Esq.

Providence, R. I.—Wm. B. Bradford, Esq.

Hartford, Conn.—E. W. Bull, Esq.

Norwalk, Conn.—J. W. Benedict, Editor of the Norwalk Gazette.

Boston—J. R. Newell, Esq. agricultural warehouse, 52 North Market st.

New-Bedford, Mass.—Richard Williams, Post-M.

Pittsfield, Mass.—Samuel D. Colt, Esq.

Worcester, Mass.—William Lincoln, Esq.

Newburyport—Wm. J. Grier, Indian-hill farm.

Portsmouth, N. H.—John W. Foster, Esq.

New-Brunswick, N. J.—Turhune & Letson.

Trenton, N. J.—

Paterson, N. J.—Day & Burnett.

Newark, N. J.—James M. Carrington, Esq.

Philadelphia—

Pittsburg, Pa.—L. Charnotet, corner of Penn and Seventh-st.

Cincinnati—

Baltimore—George F. Miller, American Farmer's office.

Washington City—P. Munro, coin. merchant.

Richmond, Va.—James Heron, Esq.; refer also to Wm. H. Richardson, Esq.

Charleston, S. C.—George Cox, seedsman.

Savannah, Ga.—Charles A. Woodruff, Esq.

Mobile—A. B. Allen, Esq.

New-Orleans—Wm. Smith, 55 Royal-street.

Halifax, N. S.—John Witham, Esq.

The following description of the GARDEN is extracted from the August number of the NEW-YORK FARMER AND HORTICULTURAL REPOSITORY.

"One of the best planned and best executed models of a garden which we have visited, is the establishment of Mr. A. Parmentier, about two miles from Brooklyn. The following map will serve to convey some idea of the general disposition of the whole, but we are confident that no plan nor description can furnish an adequate image of this delightful spot. We look upon it as an era in the history of our Horticulture. We do not mean to assert by this that the various branches of this science were not understood and practised by most of our gardeners before the arrival of Mr. P. The villas and country residences of many of our citizens, and our markets and fruit-shops are abundant evidence that both the ornamental and useful branches of the art were successfully pursued among us in the tasteful embellishment of landscape scenery, and in the abundant production of the finest fruits which any climate can boast of. But we do not know of an instance where the several departments of the gardener's labours are combined so extensively and with such scientific skill: nearly 25 acres of ground are enclosed, and the inhabitants of the vicinity, and those who recollect the original site of the garden, now view with astonishment, in the short space of three years, one of the most stony, rugged, sterile pieces of ground on the whole island, which seemed to bid defiance to the labours of man, now stored with the most luxuriant fruit and blooming with the most beautiful flowers.

"The ground plan of the garden, though nearly level, has considerable diversity of surface; the most elevated part facing the south and south-west, is appropriated for the purpose of a vineyard, and the most valuable varieties of the grape, foreign as well as indigenous, are here cultivated. The beds of the flowering or ornamental part compose broad belts laid out in a serpentine or waving direction, and edged with thirift, (*statice armeria*.) We have never seen this plant applied to this purpose so extensively; and if it could retain the beautiful appearance throughout the season, which it exhibits in the first summer month, with its delicate pink blossoms, it would afford the finest possible material for a border which could be employed; but it does not long remain in flower, and its verdure is inferior to the box, which is commonly used for that purpose.

"Nothing can exceed the effect of the contrast in colour and form in the various flowers and shrubs of these sections, and the delicate foliage and rich blossoms of many of our native plants are not among the least attractive in this assemblage, arranged at frequent intervals. The several species of *Robinia*, the *Philadelphus grandiflorus*, the *Halesia*, the *Ptelea*, and many others conspicuous for their beauty, interspersed and contrasted with the delicate *Tamarix* of Europe, the *Paper mulberry* now bearing its curious fruit, and the several species of *Alnus*, *Myrica*, and *Populus*; the splendid *Anchusa capensis*, with its azure blossoms, and the no less luxuriant *Balsamine*, and thousands of others which we might mention, are all disposed in the most artful manner to heighten the effect, and at the same time to conceal the appearance of art.

"In the northern parts of the garden are contained the nurseries; samples of each kind of tree which are kept in the nurseries are distributed in the beds. To the left of the garden an avenue leads to a rustic arbour, curiously constructed of the crooked limbs of trees, in their rough state, covered with bark and moss. From the top of this arbour

a view of the whole garden and the surrounding scenery is exhibited, extending to Staten-island, the Bay, Governor's island, and the City. At some distance from the rustic arbour is the French saloon, a beautiful oval, skirted with privet, *ligustrum*, kept dwarfed to the height of a foot, and enclosing a solid mass of China monthly roses. The various kinds of fruit trees are carefully arranged, and the lanes leading to them are skirted with the different species in a bearing state, for better exhibition, and to furnish the necessary grafts for the establishment.

"The green-house department, although not so extensive as some in our vicinity, contains many beautiful plants, exhibited with the same tasteful arrangement which characterises the whole of Mr. Parmentier's establishment; even the method in disposing the pots, according to some principle of grouping or contrasting the colour and size of the flowers, entertains the eye, and shows the variety of ways in which a skilful gardener may distribute his materials to produce picturesque effect.

"The manner of protecting the plants from the violence of the weather or the heat of the sun, is quite novel: canvass covers being so managed as to be rolled or unrolled with the greatest ease and despatch, by means of ropes and pulleys. The necessity of some such screen is quite obvious, when plants, and particularly tender exotics, are exposed to our excessive sun, and yet it is too generally neglected among our gardeners.

"We are gratified in recommending this establishment as one of the few examples in our neighbourhood, of the art of laying out a garden so as to combine the principles of the landscape with the conveniences of the nursery or orchard; and every proprietor, who may have a piece of land which he wishes to arrange and embellish in this manner, may find it to his advantage to consult Mr. Parmentier."

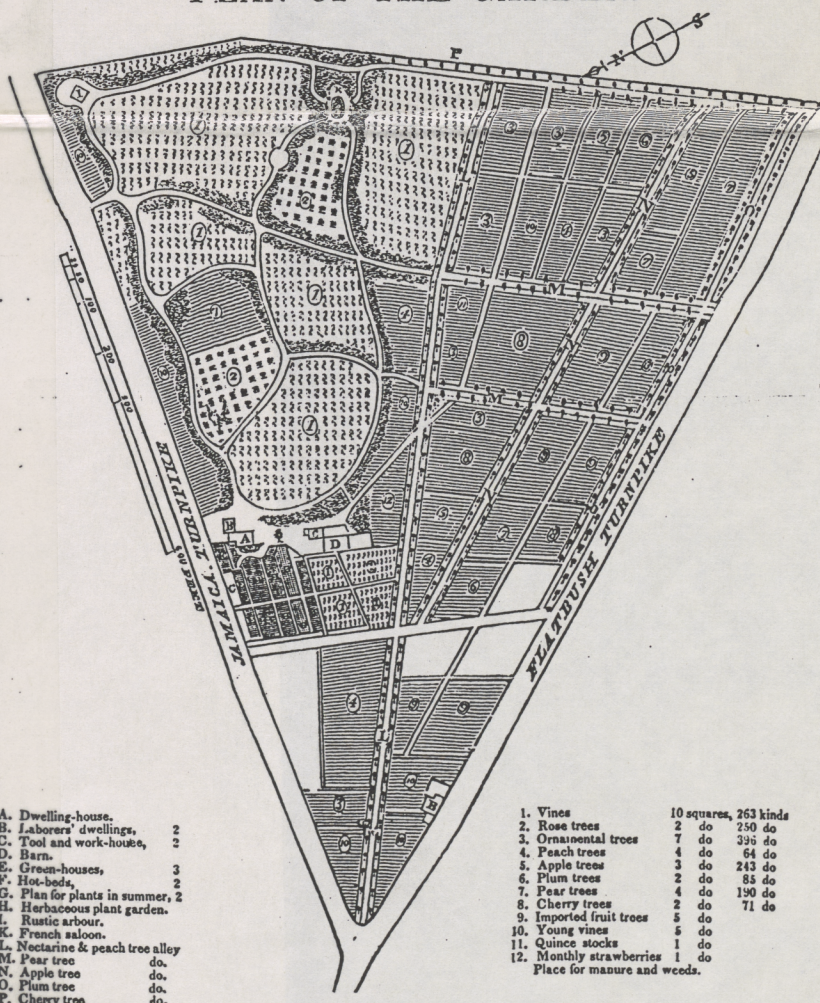

Collections, for sending to Europe, of 80 or 100 kinds of Seeds of Native Trees and Shrubs, for 20 to 25 dollars, consisting of Oak, Walnut, Magnolia, Maple, Pine, Catalpa, Andromeda, Tulip Tree, Copal Tree, Birch, Ash, Sour Gum, Laurel, Sassafras, American Holly, Georgia Bark, &c. &c.—I can also procure, to order, a large assortment of American Shrubs and Trees, for the same purpose.

I would be glad to exchange with any gentleman for seeds of remarkable native forest trees, shrubs, or grape vines, which are not in this catalogue; particularly I wish to get the seed of the large-leaved magnolia (*magnolia macrophylla*), which, I understand, grows naturally in Tennessee, and in North Carolina about 10 or 12 miles to the south-east of Lincoln court-house: this kind must be distinguished from the great flowing or laurel-leaved magnolia, (*magnolia grandiflora*.)

Conveyances can always be had from

any of the following stables: Messrs. Coe S. Downing's, Snedecor's, Cocke & Conklin's, Hunter's, and others, near the Fulton Ferry; and also from those near the Main-st. Ferry; any of which will furnish a gig and a good horse for one hour for 75 cents, the second hour will be 25 cents more; besides, there are several Stages for Flatbush, Coney-Island, Jamaica, Rockaway, Babylon, &c. passing daily.

PLAN OF THE GARDEN.

1. Vines	10 squares, 263 kinds
2. Rose trees	2 do 250 do
3. Ornamental trees	7 do 396 do
4. Peach trees	4 do 64 do
5. Apple trees	3 do 243 do
6. Plum trees	2 do 85 do
7. Pear trees	4 do 190 do
8. Cherry trees	2 do 71 do
9. Imported fruit trees	5 do
10. Young vines	5 do
11. Quince stocks	1 do
12. Monthly strawberries	1 do
Place for manure and weeds.
